Introduction

The Morningstar Category classifications were introduced in 1996 to help investors make meaningful comparisons between mutual funds. Morningstar found that the investment objective listed in a fund's prospectus often did not adequately explain how the fund actually invested. For example, many funds claimed to be seeking "growth," but some of those were investing in established blue-chip companies while others were investing in small-cap companies.

The Morningstar Category classifications solved this problem by breaking portfolios into peer groups based on their holdings. The categories help investors identify the top-performing funds, assess potential risk, and build well-diversified portfolios. Morningstar regularly reviews the category structure and the portfolios within each category to ensure that the system meets the needs of investors.

Morningstar assigns categories to all types of portfolios, such as mutual funds, variable annuities, and separate accounts. Portfolios are placed in a given category based on their average holdings statistics over the past three years. Morningstar's editorial team also reviews and approves all category assignments. If the portfolio is new and has no history, Morningstar estimates where it will fall before giving it a more permanent category assignment. When necessary, Morningstar may change a category assignment based on recent changes to the portfolio.

The driving principles behind the classification system are as follows:

- ▶ Individual portfolios within a category invest in similar types of securities and therefore share the same risk factors (for example, style risk or prepayment risk).
- ▶ Individual portfolios within a category can, in general, be expected to behave more similarly to one another than to portfolios outside the category.
- ▶ The aggregate performance of different categories differs materially over time.
- ▶ Categories have enough constituents to form the basis for reasonable peer group comparisons.
- ▶ The distinctions between categories are meaningful to investors and assist in their pursuit of investing goals.

In the United States, Morningstar supports 127 categories, which map into nine category groups (U.S. equity, sector equity, allocation, international equity, alternative, commodities, taxable bond, municipal bond, and money market). The category group indexes and category indexes listed with each category are used in Morningstar's tools and reports to show performance relative to a benchmark.

Category Review Process

Morningstar engages in a formal category review process organized by Category Group. Each Category Group is reviewed twice each year: U.S. Equity, Sector Equity, International Equity are reviewed in April and September; Alternative, Allocation, and Commodities are reviewed in April and October; Taxable Bond and Municipal Bond are reviewed in July and November. The month listed corresponds to when fund companies are notified of proposed category changes and are given the opportunity to appeal the proposals.

The process begins with a quantitative filter that proposes category recommendations based upon the three-year trailing portfolio statistics, which are calculated from an investment's reported holdings. There is a wealth of data used in this process, but the statistics examined coincide with the major portfolio components we use to define categories, such as asset allocation, market capitalization, value-growth score, and duration. The recommendations for changes to existing category assignments are then reviewed by Morningstar Manager Research analysts, who accept or reject the system's proposals. Our research team uses a mosaic approach when performing our qualitative assignment. Their decision is based on many factors, including, but not limited to: familiarity with the strategy of the portfolio managers and fund family, their understanding of current market forces, an appreciation for alternative strategies which may not be borne out adequately in our statistical calculations, and a desire to portray the most accurate picture of economic exposure possible.

After we propose a change to a fund's category, we notify fund representatives for each investment. Category changes are sent to the fund's advisor with ample time to challenge our opinion and provide contravening information in a category appeal. Once an appeal is received, the change is escalated and reviewed again by a second group of analysts.

In addition to the formal review processes, we accept category appeals throughout the year. Morningstar reviews all appeals, but generally rejects those that are based only upon a philosophical difference in the category definition. Successful appeals typically provide information demonstrating that our analysis is incomplete or inaccurate. These off-quarter reviews are reserved for miscategorizations that are attributable to the incorrect initial assignment for new funds, data errors, strategy changes, or missing or incomplete data. Regardless of when these requests are received, all category changes are made on the last business day of the month in which they are reviewed. Changes to the category assignment as a result of this process are typically available in products by the third business day of the month following the review period. Appeals can be submitted only by fund representatives, and not by third parties. In the case that a category change was initiated by a Morningstar analyst, we will notify fund representatives and offer an appeal period.

Fund representatives may request an appeal form by emailing category@morningstar.com.

Changes

April 30, 2021

- ▶ Added Macro Trading, Event Driven, Relative Value Arbitrage, Derivative Income, Options Trading, Multistrategy, Equity Market Neutral, World Large-Stock Growth, World Large-Stock Blend, World Large-Stock Value, and Target-Date 2065+
- ▶ Added U.S Category Groups Nontraditional Equity and Miscellaneous
- ▶ Retired Long-Short Credit, Bear Market, Volatility, Multicurrency, Options-based, Multialternative, Market Neutral, and World Large Stock
- ▶ Renamed Target-Date 2060+ to Target-Date 2060 and Managed Futures to Systematic Trend
- ▶ Revised text definition of World Small/Mid Stock, Bank Loan, and Nontraditional Bond

April 30, 2020

- ▶ Added Commodities Focused
- ▶ Retired Commodities Agriculture, Commodities Energy, Commodities Industrial Metals, and Commodities Precious Metals
- ▶ Revised text definition of Mid-Cap Value, Mid-Cap Blend, and Mid-Cap Growth
- ▶ Removed Star Ratings and Rankings calculations for Stable Value

April 30, 2019

- ▶ Added Intermediate Core-Plus Bond, Target Maturity, Muni Target Maturity, and World Bond-USD Hedged
- ▶ Renamed Intermediate-Term Bond to Intermediate Core Bond
- ▶ Revised text definition of World Bond, Corporate Bond, Long-Term Bond, and Intermediate Core Bond

April 30, 2018

- ▶ Added Money Market— Non-40 Act
- ▶ Revised text definition of Muni National Long, Muni National Intermediate, Muni National Short, Muni Single State Long, Muni Single State Intermediate, Muni Single State Short, Muni California Long, Muni California Intermediate, Muni New York Long, Muni New York Intermediate, and Bank Loan
- ▶ Revised Category Review Process section

Oct. 31, 2017

- ▶ Renamed Option Writing to Options-based
- ▶ Revised text definition of Options-based, World Bond, Target-Date 2055, and Target-Date 2060+

April 28, 2017

- ▶ Added World Small/Mid Stock
- ▶ Renamed World Stock to World Large Stock
- ▶ Retired Commodities Miscellaneous

- ▶ Revised text definition of Nontraditional Bond

June 30, 2016

- ▶ Revised text definition of Long-Short Equity, Option Writing, Prime Money Market, Taxable Money Market, and Tax-Free Money Market.

April 29, 2016

- ▶ Added Infrastructure; Emerging-Markets Local-Currency Bond; Target-Date 2060+; Option Writing; Long-Short Credit; Prime Money Market; Allocation— 15% to 30% Equity; Allocation— 85%+ Equity
- ▶ Renamed: Target Date 2051+ to Target-Date 2055; Retirement Income to Target-Date Retirement; Conservative Allocation to Allocation— 30% to 50% Equity; Moderate Allocation to Allocation— 50% to 70% Equity; Aggressive Allocation to Allocation— 70% to 85% Equity;
- ▶ Added Morningstar Index assignments to categories
- ▶ Added Category Review Process section

April 30, 2014

- ▶ Added Energy Limited Partnership

Oct. 31, 2013

- ▶ Added Corporate Bond, Preferred Stock, and Tactical Allocation

April 30, 2013

- ▶ Renamed Currency to Multicurrency
- ▶ Added Single Currency
- ▶ Added Miscellaneous Region
- ▶ Renamed U.S. Broad Asset Class to U.S. Category Group and Global Broad Asset Class to Global Broad Category Group
- ▶ Renamed U.S. Category Groups (Balanced to Allocation, U.S. Stock to U.S. Equity, International Stock to International Equity, and Sector Stock to Sector Equity)

April 30, 2012

- ▶ Created the Sector Stock U.S. Broad Asset Class, and moved 14 categories from U.S. Stock, International Stock, and Alternative asset classes into this new asset class
- ▶ Relaunched Muni Single State Short
- ▶ Replaced Target-Date 2050+ with Target-Date 2051+
- ▶ Added India Equity, Foreign Small/Mid-Blend, Target-Date 2046-2050
- ▶ Renamed Muni-Short to Muni National Short

Oct. 31, 2011

- ▶ Added Nontraditional Bond

- ▶ Replaced Consumer Staples with Consumer Defensive and Consumer Discretionary with Consumer Cyclical

April 30, 2011

- ▶ Replaced Long/Short with Long/Short Equity
- ▶ Added Multialternative, Volatility, Trading—Leveraged Commodities, Trading—Inverse Commodities, Trading—Leveraged Debt, Trading—Inverse Debt, Trading—Leveraged Equity, Trading—Inverse Equity, Trading—Miscellaneous

Sept. 30, 2010

- ▶ Added Aggressive Allocation and China Region, and made the Market Neutral category available to all universes
- ▶ Removed Muni Single State Short

June 30, 2009

- ▶ Added the Commodities broad asset class and six commodities categories: Broad Basket, Energy, Precious Metals, Agriculture, Industrial Metals, and Miscellaneous
- ▶ Added Consumer Discretionary, Consumer Staples, Equity Energy, and Industrials

Jan. 30, 2009

- ▶ Introduced Target-Date categories in five-year increments for years 2011-2050
- ▶ Added Retirement Income
- ▶ Added Miscellaneous Sector

July 31, 2008

- ▶ Added Global Real Estate and Currency
- ▶ Added the Alternative broad asset class
- ▶ Removed Muni Florida

Sept. 30, 2007

- ▶ Added Leveraged Net Long and Market Neutral to the separate accounts and custom funds databases

Feb. 28, 2006

- ▶ Added Inflation-Protected Bond, Long-Short, Target-Date 2000-2014, Target-Date 2015-2029, and Target-Date 2030+
- ▶ Added the Balanced broad asset class

May 31, 2004

- ▶ Replaced the Muni Single State Intermediate/Short category with two new categories: Muni Single State Intermediate and Muni Single State Short

- ▶ Added Stable Value category (currently used for custom funds and separate accounts only)

Sept. 30, 2003

- ▶ Replaced the Foreign Stock category with five new categories: Foreign Large Value, Foreign Large Blend, Foreign Large Growth, Foreign Small/Mid-Value, and Foreign Small/Mid-Growth

March 30, 2003

- ▶ Discontinued Domestic Hybrid and split into Conservative Allocation and Moderate Allocation
- ▶ Created Bear Market, Bank Loan, High Yield Muni, Muni Florida, Muni Pennsylvania, Muni Massachusetts, Muni New Jersey, Muni Ohio, and Muni Minnesota
- ▶ Name changes: International Hybrid to World Allocation, International Bond to World Bond

U.S. Equity

Large Value

Large-value portfolios invest primarily in big U.S. companies that are less expensive or growing more slowly than other large-cap stocks. Stocks in the top 70% of the capitalization of the U.S. equity market are defined as large cap. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).

Category Group Index: S&P 500 TR

Category Index: Russell 1000 Value TR USD

Morningstar Index: Morningstar US Large Mid Brd Val TR USD

Large Blend

Large-blend portfolios are fairly representative of the overall U.S. stock market in size, growth rates, and price. Stocks in the top 70% of the capitalization of the U.S. equity market are defined as large cap. The blend style is assigned to portfolios where neither growth nor value characteristics predominate. These portfolios tend to invest across the spectrum of U.S. industries, and owing to their broad exposure, the portfolios' returns are often similar to those of the S&P 500 Index.

Category Group Index: S&P 500 TR

Category Index: Russell 1000 TR USD

Morningstar Index: Morningstar US Large-Mid TR USD

Large Growth

Large-growth portfolios invest primarily in big U.S. companies that are projected to grow faster than other large-cap stocks. Stocks in the top 70% of the capitalization of the U.S. equity market are defined as large cap. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields). Most of these portfolios focus on companies in rapidly expanding industries.

Category Group Index: S&P 500 TR

Category Index: Russell 1000 Growth TR USD

Morningstar Index: Morningstar US Large Mid Brd Grt TR USD

Mid-Cap Value

Some mid-cap value portfolios focus on medium-size companies while others land here because they own a mix of small-, mid-, and large-cap stocks. All look for U.S. stocks that are less expensive or growing more slowly than the market. Stocks in the middle 20% of the capitalization of the U.S. equity market are defined as mid-cap. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).

Category Group Index: S&P 500 TR

Category Index: Russell Midcap Value TR USD

Morningstar Index: Morningstar US Mid Cap Brd Val TR USD

Mid-Cap Blend

The typical mid-cap blend portfolio invests in U.S. stocks of various sizes and styles, giving it a middle-of-the-road profile. Most shy away from high-priced growth stocks but aren't so price-conscious that they land in value territory. Stocks in the middle 20% of the capitalization of the U.S. equity market are defined as mid-cap. The blend style is assigned to portfolios where neither growth nor value characteristics predominate.

Category Group Index: S&P 500 TR

Category Index: Russell Midcap TR USD

Morningstar Index: Morningstar US Mid Cap TR USD

Mid-Cap Growth

Some mid-cap growth portfolios invest in stocks of all sizes, thus leading to a mid-cap profile, but others focus on midsize companies. Mid-cap growth portfolios target U.S. firms that are projected to grow faster than other mid-cap stocks, therefore commanding relatively higher prices. Stocks in the middle 20% of the capitalization of the U.S. equity market are defined as mid-cap. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields).

Category Group Index: S&P 500 TR

Category Index: Russell Mid Cap Growth TR USD

Morningstar Index: Morningstar US Mid Cap Brd Grt TR USD

Small Value

Small-value portfolios invest in small U.S. companies with valuations and growth rates below other small-cap peers. Stocks in the bottom 10% of the capitalization of the U.S. equity market are defined as small cap. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).

Category Group Index: S&P 500 TR

Category Index: Russell 2000 Value TR USD

Morningstar Index: Morningstar US Small Brd Val Ext TR USD

Small Blend

Small-blend portfolios favor U.S. firms at the smaller end of the market-capitalization range. Some aim to own an array of value and growth stocks while others employ a discipline that leads to holdings with valuations and growth rates close to the small-cap averages. Stocks in the bottom 10% of the capitalization of the U.S. equity market are defined as small cap. The blend style is assigned to portfolios where neither growth nor value characteristics predominate.

Category Group Index: S&P 500 TR

Category Index: Russell 2000 TR USD

Morningstar Index: Morningstar US Small Cap Ext TR USD

Small Growth

Small-growth portfolios focus on faster-growing companies whose shares are at the lower end of the market-capitalization range. These portfolios tend to favor companies in up-and-coming industries or young firms in their early growth stages. Because these businesses are fast-growing and often richly valued, their stocks tend to be volatile. Stocks in the bottom 10% of the capitalization of the U.S. equity market are defined as small cap. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields).

Category Group Index: S&P 500 TR

Category Index: Russell 2000 Growth TR USD

Morningstar Index: Morningstar US Small Brd Grt Ext TR USD

Leveraged Net Long

Leveraged net long portfolios seek income by establishing long and short positions in securities. The most common strategy for leveraged net long portfolios is to take long positions in securities that have been identified as attractive and short positions in securities that have been identified as overvalued. These portfolios typically hold long positions in securities with an aggregate value of up to 130% of its net assets. In addition, these portfolios will establish short positions in securities with a market value of up to 30% of its net assets. The net long exposure therefore remains 100%, but it is a leveraged exposure. This category is used only in Morningstar's custom fund and separate account databases.

Category Group Index: S&P 500 TR

Category Index: Russell 3000 TR USD

Morningstar Index: Morningstar US Market TR USD

Sector Equity

Communications

Communications portfolios concentrate on telecommunications and media companies of various kinds. Most buy some combination of cable television, wireless-communications, and communications-equipment firms as well as traditional phone companies. A few favor entertainment firms, mainly broadcasters, film studios, publishers, and online service providers.

Category Group Index: MSCI ACWI NR USD

Category Index: S&P 1500 Telecom Services TR

Consumer Cyclical

Consumer cyclical portfolios seek capital appreciation by investing in equity securities of U.S. or non-U.S. companies in the consumer cyclical sector.

Category Group Index: MSCI ACWI NR USD

Category Index: S&P 1500 Cons Discretionary TR

Morningstar Index: Morningstar US Consumr Cyclcl TR USD

Consumer Defensive

Consumer defensive portfolios seek capital appreciation by investing in equity securities of U.S. or non-U.S. companies that are engaged in the manufacturing, sales, or distribution of consumer staples.

Category Group Index: MSCI ACWI NR USD

Category Index: S&P 1500 Cons Staples TR

Morningstar Index: Morningstar US Consumr Dfnsve TR USD

Energy Limited Partnership

Energy Limited Partnership funds invest a significant amount of their portfolio in energy master limited partnerships. These include but are not limited to limited partnerships specializing in midstream operations in the energy industry.

Category Group Index: MSCI ACWI NR USD

Category Index: Morningstar MLP Composite TR USD

Morningstar Index: Morningstar MLP Composite TR USD

Equity Energy

Equity energy portfolios invest primarily in equity securities of U.S. or non-U.S. companies who conduct business primarily in energy-related industries. This includes and is not limited to companies in alternative energy, coal, exploration, oil and gas services, pipelines, natural gas services, and refineries.

Category Group Index: MSCI ACWI NR USD

Category Index: S&P 1500 Energy TR

Morningstar Index: Morningstar US Energy TR USD

Equity Precious Metals

Precious-metals portfolios focus on mining stocks, though some do own small amounts of gold bullion. Most portfolios concentrate on gold-mining stocks, but some have significant exposure to silver-, platinum-, and base-metal-mining stocks as well. Precious-metals companies are typically based in North America, Australia, or South Africa.

Category Group Index: MSCI ACWI NR USD

Category Index: MSCI World/Metals & Mining NR USD

Morningstar Index: Morningstar Gbl Upstm Nat Res TR USD

Financial

Financial portfolios seek capital appreciation by investing primarily in equity securities of U.S. or non-U.S. financial-services companies, including banks, brokerage firms, insurance companies, and consumer credit providers.

Category Group Index: MSCI ACWI NR USD

Category Index: S&P 1500 Financials TR

Morningstar Index: Morningstar US Financial Services TR USD

Global Real Estate

Global real estate portfolios invest primarily in non-U.S. real estate securities but may also invest in U.S. real estate securities. Securities that these portfolios purchase include: debt securities, equity securities, convertible securities, and securities issued by real estate investment trusts and REIT-like entities. Portfolios in this category also invest in real estate operating companies.

Category Group Index: MSCI ACWI NR USD

Category Index: S&P Global REIT TR USD

Morningstar Index: Morningstar US Real Estate TR USD

Health

Health portfolios focus on the medical and health-care industries. Most invest in a range of companies, buying everything from pharmaceutical and medical-device makers to HMOs, hospitals, and nursing homes. A few portfolios concentrate on just one industry segment, such as service providers or biotechnology firms.

Category Group Index: MSCI ACWI NR USD

Category Index: S&P 1500 Health Care TR

Morningstar Index: Morningstar US Healthcare TR USD

Industrials

Industrial portfolios seek capital appreciation by investing in equity securities of U.S. or non-U.S. companies that are engaged in services related to cyclical industries. This includes and is not limited to companies in aerospace and defense, automotive, chemicals, construction, environmental services, machinery, paper, and transportation.

Category Group Index: MSCI ACWI NR USD

Category Index: S&P 1500 Industrials TR

Morningstar Index: Morningstar US Industrials TR USD

Infrastructure

Infrastructure equity funds invest more than 60% of their assets in stocks of companies engaged in infrastructure activities. Industries considered to be part of the infrastructure sector include: oil & gas midstream; waste management; airports; integrated shipping; railroads; shipping & ports; trucking; engineering & construction; infrastructure operations; and the utilities sector.

Category Group Index: MSCI ACWI NR USD

Category Index: DJ Brookfld Global Infra TR USD

Morningstar Index: Morningstar Gbl Eq Infra GR USD

Natural Resources

Natural-resources portfolios focus on commodity-based industries such as energy, chemicals, minerals, and forest products in the United States or outside of the United States. Some portfolios invest across this spectrum to offer broad natural-resources exposure. Others concentrate heavily or even exclusively in specific industries. Portfolios that concentrate primarily in energy-related industries are part of the equity energy category.

Category Group Index: MSCI ACWI NR USD

Category Index: S&P North American Natural Resources TR

Morningstar Index: Morningstar Gbl Upstm Nat Res TR USD

Real Estate

Real estate portfolios invest primarily in real estate investment trusts of various types. REITs are companies that develop and manage real estate properties. There are several different types of REITs, including apartment, factory-outlet, health-care, hotel, industrial, mortgage, office, and shopping center REITs. Some portfolios in this category also invest in real estate operating companies.

Category Group Index: MSCI ACWI NR USD

Category Index: S&P United States REIT TR USD

Morningstar Index: Morningstar US Real Estate TR USD

Technology

Technology portfolios buy high-tech businesses in the U.S. or outside of the U.S. Most concentrate on computer, semiconductor, software, networking, and Internet stocks. A few also buy medical-device and biotechnology stocks, and some concentrate on a single technology industry.

Category Group Index: MSCI ACWI NR USD

Category Index: Morningstar SEC/Technology TR

Morningstar Index: Morningstar US Technology TR USD

Utilities

Utilities portfolios seek capital appreciation by investing primarily in equity securities of U.S. or non-U.S. public utilities including electric, gas, and telephone-service providers.

Category Group Index: MSCI ACWI NR USD

Category Index: S&P 1500 Utilities TR

Morningstar Index: Morningstar US Utilities TR USD

Miscellaneous Sector

Miscellaneous-sector portfolios invest in specific sectors that do not fit into any of Morningstar's existing sector categories and for which not enough funds exist to merit the creation of a separate category.

Category Group Index: MSCI ACWI NR USD

Category Index: Morningstar US Market TR USD

Morningstar Index: Morningstar US Market TR USD

Allocation

Allocation — 15% to 30% Equity

Funds in allocation categories seek to provide both income and capital appreciation by investing in multiple asset classes, including stocks, bonds, and cash. These portfolios are dominated by domestic holdings and have equity exposures between 15% and 30%.

Category Group Index: Morningstar Moderate Target Risk TR USD

Category Index: Morningstar Con Tgt Risk TR USD

Convertibles

Convertible-bond portfolios are designed to offer some of the capital-appreciation potential of stock portfolios while also supplying some of the safety and yield of bond portfolios. To do so, they focus on convertible bonds and convertible preferred stocks. Convertible bonds allow investors to convert the bonds into shares of stock, usually at a preset price. These securities thus act a bit like stocks and a bit like bonds.

World Allocation

World-allocation portfolios seek to provide both capital appreciation and income by investing in three major areas: stocks, bonds, and cash. While these portfolios do explore the whole world, most of them focus on the U.S., Canada, Japan, and the larger markets in Europe. It is rare for such portfolios to invest more than 10% of their assets in emerging markets. These portfolios typically have at least 10% of assets in bonds, less than 70% of assets in stocks, and at least 40% of assets in non-U.S. stocks or bonds.

Category Index: Morningstar Gbl Allocation TR USD

Morningstar Index: Morningstar Mod Tgt Risk TR USD

Tactical Allocation

Tactical Allocation portfolios seek to provide capital appreciation and income by actively shifting allocations across investments. These portfolios have material shifts across equity regions, and bond sectors on a frequent basis. To qualify for the tactical allocation category, the fund must have minimum exposures of 10% in bonds and 20% in equity. Next, the fund must historically demonstrate material shifts in sector or regional allocations either through a gradual shift during three years or through a series of material shifts on a quarterly basis. Within a three-year period, typically the average quarterly changes between equity regions and bond sectors exceeds 15% or the difference between the maximum and minimum exposure to a single equity region or bond sector exceeds 50%.

International Equity

Foreign Large-Value

Foreign large-value portfolios invest mainly in big international stocks that are less expensive or growing more slowly than other large-cap stocks. Most of these portfolios divide their assets among a dozen or more developed markets, including Japan, Britain, France, and Germany. These portfolios primarily invest in stocks that have market caps in the top 70% of each economically integrated market (such as Europe or Asia ex-Japan). Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow). These portfolios typically will have less than 20% of assets invested in U.S. stocks.

Nontraditional Equity

Long-Short Equity

Long-short equity portfolios hold sizeable stakes in both long and short positions in equities, exchange traded funds, and related derivatives. Some funds that fall into this category will shift their exposure to long and short positions depending on their macro outlook or the opportunities they uncover through bottom-up research. At least 75% of the assets are in equity securities or derivatives, and funds in the category will typically have beta values to relevant benchmarks of between 0.3 and 0.8.

Category Group Index: S&P 500 TR USD

Category Index: MSCI ACWI NR USD

Morningstar Index: Morningstar US Market TR USD

Derivative Income

Derivative income strategies primarily use an options overlay to generate income while maintaining significant exposure to equity market risk. Income is typically generated through covered call writing strategies, for example, while traditional equity risk factors dictate a substantial portion of the return. Funds in the category will typically have beta values to relevant benchmarks of between 0.6 and 0.9.

Category Index: CBOE S&P 500 BuyWrite BXM

Morningstar Index: Morningstar US Market TR USD

Alternative

Macro Trading

Macro trading strategies, using either systematic or discretionary methods, look for investment opportunities by studying such factors as the global economy, government policies, interest rates, inflation, and market trends. As opportunists, these funds are not restricted by asset class and may invest across such disparate assets as global equities, bonds, currencies, and commodities, and make extensive use of derivatives. Although these strategies aim to provide returns that are not correlated to traditional market indexes over a full market cycle, they can take significant directional long or short positions on any asset class over short periods and may have relatively high portfolio turnover.

Category Group Index: MSCI ACWI NR USD

Category Index: Morningstar Mod Con Tgt Risk TR USD

Morningstar Index: Morningstar Mod Con Tgt Risk TR USD

Event Driven

Event driven strategies attempt to profit when security prices change in response to certain corporate actions, such as bankruptcies, mergers and acquisitions, emergence from bankruptcy, shifts in corporate strategy, and other atypical events. Activist shareholder and distressed investment strategies also fall into this category. These portfolios typically focus on equity securities but can invest across the capital structure. They typically have low to moderate equity market sensitivity since company-specific developments tend to drive security prices.

Category Group Index: MSCI ACWI NR USD

Category Index: Morningstar Mod Con Tgt Risk TR USD

Morningstar Index: Morningstar Mod Con Tgt Risk TR USD

Relative Value Arbitrage

Relative value strategies seek out pricing discrepancies between pairs or combinations of securities regardless of asset class. They often employ one or a combination of debt, equity, and convertible arbitrage strategies, among others. They can use significant leverage and typically seek to profit from the convergence of values between securities. Funds in this category typically have low beta exposures to major market indexes due to their offsetting long and short exposures.

Category Group Index: MSCI ACWI NR USD

Category Index: Morningstar Mod Con Tgt Risk TR USD

Morningstar Index: Morningstar Mod Con Tgt Risk TR USD

Options Trading

Options trading strategies use a variety of options trades, including put writing, options spreads, options-based hedged equity, and collar strategies, among others. In addition, strategies in this group that engage in option writing may seek to generate a portion of their returns, either indirectly or directly, from the volatility risk premium associated with options trading strategies. Funds in the category will typically have beta values to relevant benchmarks of less than 0.6.

Category Group Index: MSCI ACWI NR USD

Category Index: Morningstar Mod Con Tgt Risk TR USD

Morningstar Index: Morningstar Mod Con Tgt Risk TR USD

Multistrategy

Multistrategy portfolios offer investors exposure to two or more alternative investment strategies, as defined by Morningstar's alternative category classifications, through either a single-manager or multi-manager approach. Funds in this category typically have a majority of their assets exposed to alternative strategies, but at a minimum, alternatives must comprise greater than 30% of the strategy's gross exposure. The category includes funds with static allocations to alternative strategies as well as those that tactically adjust their exposure to different alternative strategies and asset classes. Multistrategy funds typically aim to have low to modest sensitivity to traditional market indexes, although that may not be the case for strategies with lower alternatives allocations.

Category Group Index: MSCI ACWI NR USD

Category Index: Morningstar Mod Con Tgt Risk TR USD

Morningstar Index: Morningstar Mod Con Tgt Risk TR USD

Equity Market Neutral

Equity market neutral strategies attempt to profit from long and short stock selection decisions while minimizing systematic risk created by exposure to factors such as overall equity market beta, sectors, market-cap ranges, investment styles, or countries. They try to achieve this by matching long positions within each area against offsetting short positions, though they may vary their exposure to market risk factors modestly. These funds' investment strategies may be discretionary or systematic, and they keep at least 75% of their gross assets in equities or equity-related instruments such as derivatives. They typically have beta values to a relevant benchmark of less than 0.3.

Category Group Index: MSCI ACWI NR USD

Category Index: Morningstar Mod Con Tgt Risk TR USD

Morningstar Index: Morningstar Mod Con Tgt Risk TR USD

Systematic Trend

Systematic trend strategies primarily implement trend-following, price-momentum strategies by trading long and short liquid global futures, options, swaps, and foreign exchange contracts. The remaining exposure may be invested in a mix of other complementary nontraditional risk premia. These portfolios typically obtain exposure referencing a mix of diversified global markets, including commodities, currencies, government bonds, interest rates and equity indexes.

Miscellaneous

Trading — Leveraged Commodities

These funds seek to generate returns equal to a fixed multiple of short-term returns of a commodity index. The compounding of short-term returns results in performance that does not correspond to those of investing in the index with external leverage. For example, a fund attempting to achieve 2 times the returns of a given index on a daily basis is unlikely to deliver anything like 2 times the index's returns over periods longer than one day. Many of these funds seek to generate a multiple of the daily or weekly return of the reference index. Trading funds are not considered suitable for a long-term investor and are designed to be used by traders.

Category Group Index: Bloomberg Commodity TR USD

Category Index: Bloomberg Commodity TR USD

Morningstar Index: None

Trading — Inverse Commodities

These funds seek to generate returns equal to an inverse multiple of short-term returns of a commodity index. The compounding of short-term returns results in performance that does not correspond to those of investing in the index with external leverage. For example, a fund attempting to achieve negative 2 times the returns of a given index on a daily basis is unlikely to deliver anything like negative 2 times the index's returns over periods longer than one day. Many of these funds seek to generate a multiple typically negative 1 to negative 3 times of the daily or weekly return of the reference index. Trading funds are not considered suitable for a long-term investor and are designed to be used by active traders.

Commodities Broad Basket

Broad-basket portfolios can invest in a diversified basket of commodity goods including but not limited to grains, minerals, metals, livestock, cotton, oils, sugar, coffee, and cocoa. Investment can be made directly in physical assets or commodity-linked derivative instruments, such as commodity swap agreements.

Taxable Bond

Long Government

Long-government portfolios have at least 90% of their bond holdings invested in bonds backed by the U.S. government or by government-linked agencies. This backing minimizes the credit risk of these portfolios, as the U.S. government is unlikely to default on its debt. They are not risk-free, though. Because these portfolios have durations of typically more than 6.0 years, they are more sensitive to interest rates, and thus riskier, than portfolios that have shorter durations.

Morningstar calculates monthly breakpoints using the effective duration of the Morningstar Core Bond Index in determining duration assignment. Long term is defined as 125% of the three-year average effective duration of the MCBI.

Category Group Index: Barclays US Agg Bond TR USD

Category Index: Barclays US Government Long TR USD

Morningstar Index: Morningstar US 10+Y Tsy & Gv Bd TR USD

Intermediate Government

Intermediate-government portfolios have at least 90% of their bond holdings in bonds backed by the U.S. government or by government-linked agencies. This backing minimizes the credit risk of these portfolios, as the U.S. government is unlikely to default on its debt. These portfolios have durations typically between 3.5 and 6.0 years. Consequently, the group's performance—and its level of volatility—tends to fall between that of the short government and long government bond categories. Morningstar calculates monthly breakpoints using the effective duration of the Morningstar Core Bond Index in determining duration assignment. Intermediate is defined as 75% to 125% of the three-year average effective duration of the MCBI.

Category Group Index: Barclays US Agg Bond TR USD

Category Index: Barclays US Government TR USD

Morningstar Index: Morningstar US 5-10Y Tsy&Gv Bd TR USD

Short Government

Short-government portfolios have at least 90% of their bond holdings in bonds backed by the U.S. government or by government-linked agencies. This backing minimizes the credit risk of these portfolios, as the U.S. government is unlikely to default on its debt. These portfolios have durations typically between 1.0 and 3.5 years, so they have relatively less sensitivity to interest rates and, thus, low risk potential. Morningstar calculates monthly breakpoints using the effective duration of the Morningstar Core Bond Index in determining duration assignment. Short is defined as 25% to 75% of the three-year average effective duration of the MCBI.

Inflation-Protected Bond

Inflation-protected bond portfolios invest primarily in debt securities that adjust their principal values in line with the rate of inflation. These bonds can be issued by any organization, but the U.S. Treasury is currently the largest issuer for these types of securities.

Category Index: Barclays US Treasury US TIPS TR USD

Morningstar Index: Morningstar US TIPS TR USD

Long-Term Bond

Long-term bond portfolios invest primarily in investment-grade U.S. fixed-income issues including government, corporate, and securitized debt. Their durations (a measure of interest-rate sensitivity) typically range above 125% of the three-year average of the effective duration of the Morningstar Core Bond Index.

Category Group Index: Barclays US Agg Bond TR USD

Category Index: Barclays US Govt/Credit Long TR USD

Morningstar Index: Morningstar US 10+Y Corp Bd TR USD

Intermediate Core Bond

Intermediate-term core bond portfolios invest primarily in investment-grade U.S. fixed-income issues including government, corporate, and securitized debt, and hold less than 5% in below-investment-grade exposures. Their durations (a measure of interest-rate sensitivity) typically range between 75% and 125% of the three-year average of the effective duration of the Morningstar Core Bond Index.

Morningstar Index: Morningstar US Core Bd TR USD Hdg

Intermediate Core-Plus Bond

Intermediate-term core-plus bond portfolios invest primarily in investment-grade U.S. fixed-income issues including government, corporate, and securitized debt, but generally have greater flexibility than core offerings to hold non-core sectors such as corporate high yield, bank loan, emerging-markets debt, and non-U.S. currency exposures. Their durations (a measure of interest-rate sensitivity) typically range between 75% and 125% of the three-year average of the effective duration of the Morningstar Core Bond Index.

Category Group Index: Barclays US Agg Bond TR USD

Category Index: BBgBarc US Universal TR USD

Morningstar Index: None

Short-Term Bond

Short-term bond portfolios invest primarily in corporate and other investment-grade U.S. fixed-income issues and typically have durations of 1.0 to 3.5 years. These portfolios are attractive to fairly conservative investors, because they are less sensitive to interest rates than portfolios with longer durations. Morningstar calculates monthly breakpoints using the effective duration of the Morningstar Core Bond Index in determining duration assignment. Short-term is defined as 25% to 75% of the three-year average effective duration of the MCBI.

Morningstar Index: Morningstar US 1-5Y Core Bd TR USD

Ultrashort Bond

Ultrashort-bond portfolios invest primarily in investment-grade U.S. fixed-income issues and have durations typically of less than one year. This category can include corporate or government ultrashort bond portfolios, but it excludes international, convertible, multisector, and high-yield bond portfolios. Because of their focus on bonds with very short durations, these portfolios offer minimal interest-rate sensitivity and therefore low risk and total return potential. Morningstar calculates monthly breakpoints using the effective duration of the Morningstar Core Bond Index in determining duration assignment. Ultrashort is defined as 25% of the three-year average effective duration of the MCBI.

Morningstar Index: Morningstar US 1-5Y Core Bd TR USD

Bank Loan

Bank-loan portfolios primarily invest in floating-rate bank loans and floating-rate below investment-grade securities instead of bonds. In exchange for their credit risk, these loans offer high interest payments that typically float above a common short-term benchmarks such as Libor or SOFR.

Category Group Index: Barclays US Agg Bond TR USD

Category Index: S&P/LSTA Leveraged Loan TR

Morningstar Index: Morningstar US 1-5Y Core Bd TR USD

Stable Value

Stable-value portfolios seek to provide income while preventing price fluctuations. The most common stable-value portfolios invest in a diversified portfolio of bonds and enter into wrapper agreements with financial companies to guarantee against fluctuations in their share prices. These wrapper agreements typically provide price stability on a day-to-day basis, thereby insulating each portfolio's net asset value from interest-rate volatility. Therefore, the duration for each of these funds is essentially zero. This category is used only in Morningstar's custom fund, separate account, and collective investment trust databases.

Morningstar Index: Morningstar US CIT Stable Value GR USD

Corporate Bond

Corporate bond portfolios concentrate on investment-grade bonds issued by corporations in U.S. dollars, which tend to have more credit risk than government or agency-backed bonds. These portfolios hold more than 65% of their assets in corporate debt, less than 40% of their assets in non-U.S. debt, less than 35% in below-investment-grade debt, and durations that typically range between 75% and 150% of the three-year average of the effective duration of the Morningstar Core Bond Index.

Category Index: Barclays US Corp IG TR USD

Morningstar Index: Morningstar US Corp Bd TR USD Hdg

Preferred Stock

Preferred stock portfolios concentrate on preferred stocks and perpetual bonds. These portfolios tend to have more credit risk than government or agency backed bonds, and effective duration longer than other bond portfolios. These portfolios hold more than 65% of assets in preferred stocks and perpetual bonds.

Category Group Index: Barclays US Agg Bond TR USD

Category Index: BofAML Preferred Stock Fixed Rate TR USD

Morningstar Index: None

High-Yield Bond

High-yield bond portfolios concentrate on lower-quality bonds, which are riskier than those of higher-quality companies. These portfolios generally offer higher yields than other types of portfolios, but they are also more vulnerable to economic and credit risk. These portfolios primarily invest in U.S. high-income debt securities where at least 65% or more of bond assets are not rated or are rated by a major agency such as Standard & Poor's or Moody's at the level of BB (considered speculative for taxable bonds) and below.

Category Group Index: Barclays US Agg Bond TR USD

Category Index: ICE BofAML US High Yield TR USD

Morningstar Index: Morningstar US HY Bd TR USD

Multisector Bond

Multisector-bond portfolios seek income by diversifying their assets among several fixed-income sectors, usually U.S. government obligations, U.S. corporate bonds, foreign bonds, and high-yield U.S. debt securities. These portfolios typically hold 35% to 65% of bond assets in securities that are not rated or are rated by a major agency such as Standard & Poor's or Moody's at the level of BB (considered speculative for taxable bonds) and below.

Category Group Index: Barclays US Agg Bond TR USD

Category Index: Barclays US Universal TR USD

Morningstar Index: Morningstar US Core Bd TR USD Hdg

World Bond

World bond portfolios typically invest 40% or more of their assets in fixed-income instruments issued outside of the U.S. These portfolios invest primarily in investment-grade rated issues, but their strategies can vary. Some follow a conservative approach, sticking with high-quality bonds from developed markets. Others are more adventurous, owning some lower-quality bonds from developed or emerging markets. Some portfolios invest exclusively outside the U.S., while others invest in both U.S. and non-U.S. bonds. Many consistently maintain significant allocations to non-U.S. dollar currencies, while others have the flexibility to make sizeable adjustments between their U.S. dollar and non-U.S. currency exposures.

Category Index: JPM GBI-EM Global Diversified TR USD

Morningstar Index: Morningstar EM Composite Bd TR USD

Nontraditional Bond

Inclusion in nontraditional bond is informed by a balance of factors determined by Morningstar analysts. Those typically include a mix of: absolute return mandates; goals of producing returns not correlated with the overall bond market; performance benchmarks based on ultrashort-term interest rates such as T-bills; the ability to take long and short market and security-level positions using a broad range of derivatives; and few or very limited portfolio constraints on exposure to credit, sectors, currency, or interest-rate sensitivity. Funds in this group typically have the flexibility to manage duration exposure over a wide range of years and to take it to zero or a negative value.
