Introduction

The Morningstar Category classifications were introduced in 1996 to help investors make meaningful comparisons between mutual funds. Morningstar found that the investment objective listed in a fund’s prospectus often did not adequately explain how the fund actually invested. For example, many funds claimed to be seeking “growth,” but some of those were investing in established blue-chip companies while others were investing in small-cap companies.

The Morningstar Category classifications solved this problem by breaking portfolios into peer groups based on their holdings. The categories help investors identify the top-performing funds, assess potential risk, and build well-diversified portfolios. Morningstar regularly reviews the category structure and the portfolios within each category to ensure that the system meets the needs of investors.

Morningstar assigns categories to all types of portfolios, such as mutual funds, variable annuities, and separate accounts. Portfolios are placed in a given category based on their average holdings statistics over the past three years. Morningstar’s editorial team also reviews and approves all category assignments. If the portfolio is new and has no history, Morningstar estimates where it will fall before giving it a more permanent category assignment. When necessary, Morningstar may change a category assignment based on recent changes to the portfolio.

The driving principles behind the classification system are as follows:

► Individual portfolios within a category invest in similar types of securities and therefore share the same risk factors (for example, style risk or prepayment risk).
► Individual portfolios within a category can, in general, be expected to behave more similarly to one another than to portfolios outside the category.
► The aggregate performance of different categories differs materially over time.
► Categories have enough constituents to form the basis for reasonable peer group comparisons.
► The distinctions between categories are meaningful to investors and assist in their pursuit of investing goals.

In the United States, Morningstar supports 127 categories, which map into nine category groups (U.S. equity, sector equity, allocation, international equity, alternative, commodities, taxable bond, municipal bond, and money market). The category group indexes and category indexes listed with each category are used in Morningstar’s tools and reports to show performance relative to a benchmark.
Category Review Process

Morningstar engages in a formal category review process organized by Category Group. Each Category Group is reviewed twice each year: U.S. Equity, Sector Equity, International Equity are reviewed in April and September; Alternative, Allocation, and Commodities are reviewed in April and October; Taxable Bond and Municipal Bond are reviewed in July and November. The month listed corresponds to when fund companies are notified of proposed category changes and are given the opportunity to appeal the proposals.

The process begins with a quantitative filter that proposes category recommendations based upon the three-year trailing portfolio statistics, which are calculated from an investment’s reported holdings. There is a wealth of data used in this process, but the statistics examined coincide with the major portfolio components we use to define categories, such as asset allocation, market capitalization, value-growth score, and duration. The recommendations for changes to existing category assignments are then reviewed by Morningstar Manager Research analysts, who accept or reject the system’s proposals. Our research team uses a mosaic approach when performing our qualitative assignment. Their decision is based on many factors, including, but not limited to: familiarity with the strategy of the portfolio managers and fund family, their understanding of current market forces, an appreciation for alternative strategies which may not be borne out adequately in our statistical calculations, and a desire to portray the most accurate picture of economic exposure possible.

After we propose a change to a fund’s category, we notify fund representatives for each investment. Category changes are sent to the fund’s advisor with ample time to challenge our opinion and provide contravening information in a category appeal. Once an appeal is received, the change is escalated and reviewed again by a second group of analysts.

In addition to the formal review processes, we accept category appeals throughout the year. Morningstar reviews all appeals, but generally rejects those that are based only upon a philosophical difference in the category definition. Successful appeals typically provide information demonstrating that our analysis is incomplete or inaccurate. These off-quarter reviews are reserved for miscategorizations that are attributable to the incorrect initial assignment for new funds, data errors, strategy changes, or missing or incomplete data. Regardless of when these requests are received, all category changes are made on the last business day of the month in which they are reviewed. Changes to the category assignment as a result of this process are typically available in products by the third business day of the month following the review period. Appeals can be submitted only by fund representatives, and not by third parties. In the case that a category change was initiated by a Morningstar analyst, we will notify fund representatives and offer an appeal period.

Fund representatives may request an appeal form by emailing category@morningstar.com.
Changes

April 30, 2021

- Added Macro Trading, Event Driven, Relative Value Arbitrage, Derivative Income, Options Trading, Multistrategy, Equity Market Neutral, World Large-Stock Growth, World Large-Stock Blend, World Large-Stock Value, and Target-Date 2065+
- Added U.S Category Groups Nontraditional Equity and Miscellaneous
- Retired Long-Short Credit, Bear Market, Volatility, Multicurrency, Options-based, Multialternative, Market Neutral, and World Large Stock
- Renamed Target-Date 2060+ to Target-Date 2060 and Managed Futures to Systematic Trend
- Revised text definition of World Small/Mid Stock, Bank Loan, and Nontraditional Bond

April 30, 2020

- Added Commodities Focused
- Retired Commodities Agriculture, Commodities Energy, Commodities Industrial Metals, and Commodities Precious Metals
- Revised text definition of Mid-Cap Value, Mid-Cap Blend, and Mid-Cap Growth
- Removed Star Ratings and Rankings calculations for Stable Value

April 30, 2019

- Added Intermediate Core-Plus Bond, Target Maturity, Muni Target Maturity, and World Bond-USD Hedged
- Renamed Intermediate-Term Bond to Intermediate Core Bond
- Revised text definition of World Bond, Corporate Bond, Long-Term Bond, and Intermediate Core Bond

April 30, 2018

- Added Money Market—Non-40 Act
- Revised Category Review Process section

Oct. 31, 2017

- Renamed Option Writing to Options-based
- Revised text definition of Options-based, World Bond, Target-Date 2055, and Target-Date 2060+

April 28, 2017

- Added World Small/Mid Stock
- Renamed World Stock to World Large Stock
- Retired Commodities Miscellaneous
Revised text definition of Nontraditional Bond

June 30, 2016
Revised text definition of Long-Short Equity, Option Writing, Prime Money Market, Taxable Money Market, and Tax-Free Money Market.

April 29, 2016
Added Infrastructure; Emerging-Markets Local-Currency Bond; Target-Date 2060+; Option Writing; Long-Short Credit; Prime Money Market; Allocation — 15% to 30% Equity; Allocation — 85%+ Equity
Renamed: Target Date 2051+ to Target-Date 2055; Retirement Income to Target-Date Retirement; Conservative Allocation to Allocation — 30% to 50% Equity; Moderate Allocation to Allocation — 50% to 70% Equity; Aggressive Allocation to Allocation — 70% to 85% Equity;
Added Morningstar Index assignments to categories
Added Category Review Process section

April 30, 2014
Added Energy Limited Partnership

Oct. 31, 2013
Added Corporate Bond, Preferred Stock, and Tactical Allocation

April 30, 2013
Renamed Currency to Multicurrency
Added Single Currency
Added Miscellaneous Region
Renamed U.S. Broad Asset Class to U.S. Category Group and Global Broad Asset Class to Global Broad Category Group
Renamed U.S. Category Groups (Balanced to Allocation, U.S. Stock to U.S. Equity, International Stock to International Equity, and Sector Stock to Sector Equity)

April 30, 2012
Created the Sector Stock U.S. Broad Asset Class, and moved 14 categories from U.S. Stock, International Stock, and Alternative asset classes into this new asset class
Relaunched Muni Single State Short
Replaced Target-Date 2050+ with Target-Date 2051+
Added India Equity, Foreign Small/Mid-Blend, Target-Date 2046-2050
Renamed Muni-Short to Muni National Short

Oct. 31, 2011
Added Nontraditional Bond
➤ Replaced Consumer Staples with Consumer Defensive and Consumer Discretionary with Consumer Cyclical

April 30, 2011
➤ Replaced Long/Short with Long/Short Equity
➤ Added Multialternative, Volatility, Trading — Leveraged Commodities, Trading — Inverse Commodities, Trading — Leveraged Debt, Trading — Inverse Debt, Trading — Leveraged Equity, Trading — Inverse Equity, Trading — Miscellaneous

Sept. 30, 2010
➤ Added Aggressive Allocation and China Region, and made the Market Neutral category available to all universes
➤ Removed Muni Single State Short

June 30, 2009
➤ Added the Commodities broad asset class and six commodities categories: Broad Basket, Energy, Precious Metals, Agriculture, Industrial Metals, and Miscellaneous
➤ Added Consumer Discretionary, Consumer Staples, Equity Energy, and Industrials

Jan. 30, 2009
➤ Introduced Target-Date categories in five-year increments for years 2011-2050
➤ Added Retirement Income
➤ Added Miscellaneous Sector

July 31, 2008
➤ Added Global Real Estate and Currency
➤ Added the Alternative broad asset class
➤ Removed Muni Florida

Sept. 30, 2007
➤ Added Leveraged Net Long and Market Neutral to the separate accounts and custom funds databases

Feb. 28, 2006
➤ Added Inflation-Protected Bond, Long-Short, Target-Date 2000-2014, Target-Date 2015-2029, and Target-Date 2030+
➤ Added the Balanced broad asset class

May 31, 2004
➤ Replaced the Muni Single State Intermediate/Short category with two new categories: Muni Single State Intermediate and Muni Single State Short
► Added Stable Value category (currently used for custom funds and separate accounts only)

**Sept. 30, 2003**
► Replaced the Foreign Stock category with five new categories: Foreign Large Value, Foreign Large Blend, Foreign Large Growth, Foreign Small/Mid-Value, and Foreign Small/Mid-Growth

**March 30, 2003**
► Discontinued Domestic Hybrid and split into Conservative Allocation and Moderate Allocation
► Created Bear Market, Bank Loan, High Yield Muni, Muni Florida, Muni Pennsylvania, Muni Massachusetts, Muni New Jersey, Muni Ohio, and Muni Minnesota
► Name changes: International Hybrid to World Allocation, International Bond to World Bond
**U.S. Equity**

**Large Value**
Large-value portfolios invest primarily in big U.S. companies that are less expensive or growing more slowly than other large-cap stocks. Stocks in the top 70% of the capitalization of the U.S. equity market are defined as large cap. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).

Category Group Index: S&P 500 TR  
Category Index: Russell 1000 Value TR USD  
Morningstar Index: Morningstar US Large Mid Brd Val TR USD

**Large Blend**
Large-blend portfolios are fairly representative of the overall U.S. stock market in size, growth rates, and price. Stocks in the top 70% of the capitalization of the U.S. equity market are defined as large cap. The blend style is assigned to portfolios where neither growth nor value characteristics predominate. These portfolios tend to invest across the spectrum of U.S. industries, and owing to their broad exposure, the portfolios’ returns are often similar to those of the S&P 500 Index.

Category Group Index: S&P 500 TR  
Category Index: Russell 1000 TR USD  
Morningstar Index: Morningstar US Large-Mid TR USD

**Large Growth**
Large-growth portfolios invest primarily in big U.S. companies that are projected to grow faster than other large-cap stocks. Stocks in the top 70% of the capitalization of the U.S. equity market are defined as large cap. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields). Most of these portfolios focus on companies in rapidly expanding industries.

Category Group Index: S&P 500 TR  
Category Index: Russell 1000 Growth TR USD  
Morningstar Index: Morningstar US Large Mid Brd Grt TR USD
Mid-Cap Value
Some mid-cap value portfolios focus on medium-size companies while others land here because they own a mix of small-, mid-, and large-cap stocks. All look for U.S. stocks that are less expensive or growing more slowly than the market. Stocks in the middle 20% of the capitalization of the U.S. equity market are defined as mid-cap. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).
Category Group Index: S&P 500 TR
Category Index: Russell Midcap Value TR USD
Morningstar Index: Morningstar US Mid Cap Brd Val TR USD

Mid-Cap Blend
The typical mid-cap blend portfolio invests in U.S. stocks of various sizes and styles, giving it a middle-of-the-road profile. Most shy away from high-priced growth stocks but aren’t so price-conscious that they land in value territory. Stocks in the middle 20% of the capitalization of the U.S. equity market are defined as mid-cap. The blend style is assigned to portfolios where neither growth nor value characteristics predominate.
Category Group Index: S&P 500 TR
Category Index: Russell Midcap TR USD
Morningstar Index: Morningstar US Mid Cap TR USD

Mid-Cap Growth
Some mid-cap growth portfolios invest in stocks of all sizes, thus leading to a mid-cap profile, but others focus on midsize companies. Mid-cap growth portfolios target U.S. firms that are projected to grow faster than other mid-cap stocks, therefore commanding relatively higher prices. Stocks in the middle 20% of the capitalization of the U.S. equity market are defined as mid-cap. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields).
Category Group Index: S&P 500 TR
Category Index: Russell Mid Cap Growth TR USD
Morningstar Index: Morningstar US Mid Cap Brd Grt TR USD
Small Value
Small-value portfolios invest in small U.S. companies with valuations and growth rates below other small-cap peers. Stocks in the bottom 10% of the capitalization of the U.S. equity market are defined as small cap. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).
Category Group Index: S&P 500 TR
Category Index: Russell 2000 Value TR USD
Morningstar Index: Morningstar US Small Brd Val Ext TR USD

Small Blend
Small-blend portfolios favor U.S. firms at the smaller end of the market-capitalization range. Some aim to own an array of value and growth stocks while others employ a discipline that leads to holdings with valuations and growth rates close to the small-cap averages. Stocks in the bottom 10% of the capitalization of the U.S. equity market are defined as small cap. The blend style is assigned to portfolios where neither growth nor value characteristics predominate.
Category Group Index: S&P 500 TR
Category Index: Russell 2000 TR USD
Morningstar Index: Morningstar US Small Cap Ext TR USD

Small Growth
Small-growth portfolios focus on faster-growing companies whose shares are at the lower end of the market-capitalization range. These portfolios tend to favor companies in up-and-coming industries or young firms in their early growth stages. Because these businesses are fast-growing and often richly valued, their stocks tend to be volatile. Stocks in the bottom 10% of the capitalization of the U.S. equity market are defined as small cap. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields).
Category Group Index: S&P 500 TR
Category Index: Russell 2000 Growth TR USD
Morningstar Index: Morningstar US Small Brd Grt Ext TR USD
Leveraged Net Long

Leveraged net long portfolios seek income by establishing long and short positions in securities. The most common strategy for leveraged net long portfolios is to take long positions in securities that have been identified as attractive and short positions in securities that have been identified as overvalued. These portfolios typically hold long positions in securities with an aggregate value of up to 130% of its net assets. In addition, these portfolios will establish short positions in securities with a market value of up to 30% of its net assets. The net long exposure therefore remains 100%, but it is a leveraged exposure. This category is used only in Morningstar’s custom fund and separate account databases.

Category Index: Morningstar Agg Tgt Risk TR USD
Morningstar Index: Morningstar Agg Tgt Risk TR USD

Convertibles
Convertible-bond portfolios are designed to offer some of the capital-appreciation potential of stock portfolios while also supplying some of the safety and yield of bond portfolios. To do so, they focus on convertible bonds and convertible preferred stocks. Convertible bonds allow investors to convert the bonds into shares of stock, usually at a preset price. These securities thus act a bit like stocks and a bit like bonds.

Morningstar Index: Morningstar US Core Bd TR USD Hdg

World Allocation
World-allocation portfolios seek to provide both capital appreciation and income by investing in three major areas: stocks, bonds, and cash. While these portfolios do explore the whole world, most of them focus on the U.S., Canada, Japan, and the larger markets in Europe. It is rare for such portfolios to invest more than 10% of their assets in emerging markets. These portfolios typically have at least 10% of assets in bonds, less than 70% of assets in stocks, and at least 40% of assets in non-U.S. stocks or bonds.

Category Group Index: Morningstar Mod Tgt Risk TR USD
Category Index: Morningstar Gbl Allocation TR USD
Morningstar Index: Morningstar Mod Tgt Risk TR USD
**Tactical Allocation**

Tactical Allocation portfolios seek to provide capital appreciation and income by actively shifting allocations across investments. These portfolios have material shifts across equity regions, and bond sectors on a frequent basis. To qualify for the tactical allocation category, the fund must have minimum exposures of 10% in bonds and 20% in equity. Next, the fund must historically demonstrate material shifts in sector or regional allocations either through a gradual shift during three years or through a series of material shifts on a quarterly basis. Within a three-year period, typically the average quarterly changes between equity regions and bond sectors exceeds 15% or the difference between the maximum and minimum exposure to a single equity region or bond sector exceeds 50%.

International Equity

Foreign Large-Value
Foreign large-value portfolios invest mainly in big international stocks that are less expensive or growing more slowly than other large-cap stocks. Most of these portfolios divide their assets among a dozen or more developed markets, including Japan, Britain, France, and Germany. These portfolios primarily invest in stocks that have market caps in the top 70% of each economically integrated market (such as Europe or Asia ex-Japan). Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow). These portfolios typically will have less than 20% of assets invested in U.S. stocks.

**Alternative**

**Macro Trading**

Macro trading strategies, using either systematic or discretionary methods, look for investment opportunities by studying such factors as the global economy, government policies, interest rates, inflation, and market trends. As opportunists, these funds are not restricted by asset class and may invest across such disparate assets as global equities, bonds, currencies, and commodities, and make extensive use of derivatives. Although these strategies aim to provide returns that are not correlated to traditional market indexes over a full market cycle, they can take significant directional long or short positions on any asset class over short periods and may have relatively high portfolio turnover.

Morningstar Index: Morningstar Mod Con Tgt Risk TR USD

**Event Driven**

Event driven strategies attempt to profit when security prices change in response to certain corporate actions, such as bankruptcies, mergers and acquisitions, emergence from bankruptcy, shifts in corporate strategy, and other atypical events. Activist shareholder and distressed investment strategies also fall into this category. These portfolios typically focus on equity securities but can invest across the capital structure. They typically have low to moderate equity market sensitivity since company-specific developments tend to drive security prices.

Category Group Index: MSCI ACWI NR USD
Category Index: Morningstar Mod Con Tgt Risk TR USD
Morningstar Index: Morningstar Mod Con Tgt Risk TR USD

**Relative Value Arbitrage**

Relative value strategies seek out pricing discrepancies between pairs or combinations of securities regardless of asset class. They often employ one or a combination of debt, equity, and convertible arbitrage strategies, among others. They can use significant leverage and typically seek to profit from the convergence of values between securities. Funds in this category typically have low beta exposures to major market indexes due to their offsetting long and short exposures.

Category Group Index: MSCI ACWI NR USD
Category Index: Morningstar Mod Con Tgt Risk TR USD
Morningstar Index: Morningstar Mod Con Tgt Risk TR USD
Options Trading
Options trading strategies use a variety of options trades, including put writing, options spreads, options-based hedged equity, and collar strategies, among others. In addition, strategies in this group that engage in option writing may seek to generate a portion of their returns, either indirectly or directly, from the volatility risk premium associated with options trading strategies. Funds in the category will typically have beta values to relevant benchmarks of less than 0.6.

Category Index: Morningstar Mod Con Tgt Risk TR USD
Morningstar Index: Morningstar Mod Con Tgt Risk TR USD

Multistrategy
Multistrategy portfolios offer investors exposure to two or more alternative investment strategies, as defined by Morningstar’s alternative category classifications, through either a single-manager or multi-manager approach. Funds in this category typically have a majority of their assets exposed to alternative strategies, but at a minimum, alternatives must comprise greater than 30% of the strategy’s gross exposure. The category includes funds with static allocations to alternative strategies as well as those that tactically adjust their exposure to different alternative strategies and asset classes. Multistrategy funds typically aim to have low to modest sensitivity to traditional market indexes, although that may not be the case for strategies with lower alternatives allocations.

Category Group Index: MSCI ACWI NR USD
Category Index: Morningstar Mod Con Tgt Risk TR USD
Morningstar Index: Morningstar Mod Con Tgt Risk TR USD

Equity Market Neutral
Equity market neutral strategies attempt to profit from long and short stock selection decisions while minimizing systematic risk created by exposure to factors such as overall equity market beta, sectors, market-cap ranges, investment styles, or countries. They try to achieve this by matching long positions within each area against offsetting short positions, though they may vary their exposure to market risk factors modestly. These funds’ investment strategies may be discretionary or systematic, and they keep at least 75% of their gross assets in equities or equity-related instruments such as derivatives. They typically have beta values to a relevant benchmark of less than 0.3.

Category Group Index: MSCI ACWI NR USD
Category Index: Morningstar Mod Con Tgt Risk TR USD
Morningstar Index: Morningstar Mod Con Tgt Risk TR USD
Systematic Trend
Systematic trend strategies primarily implement trend-following, price-momentum strategies by trading long and short liquid global futures, options, swaps, and foreign exchange contracts. The remaining exposure may be invested in a mix of other complementary nontraditional risk premia. These portfolios typically obtain exposure referencing a mix of diversified global markets, including commodities, currencies, government bonds, interest rates and equity indexes.

Morningstar Index: None
**Miscellaneous**

**Trading — Leveraged Commodities**
These funds seek to generate returns equal to a fixed multiple of short-term returns of a commodity index. The compounding of short-term returns results in performance that does not correspond to those of investing in the index with external leverage. For example, a fund attempting to achieve 2 times the returns of a given index on a daily basis is unlikely to deliver anything like 2 times the index’s returns over periods longer than one day. Many of these funds seek to generate a multiple of the daily or weekly return of the reference index. Trading funds are not considered suitable for a long-term investor and are designed to be used by traders.

Taxable Bond

Long Government

Long-government portfolios have at least 90% of their bond holdings invested in bonds backed by the U.S. government or by government-linked agencies. This backing minimizes the credit risk of these portfolios, as the U.S. government is unlikely to default on its debt. They are not risk-free, though. Because these portfolios have durations of typically more than 6.0 years, they are more sensitive to interest rates, and thus riskier, than portfolios that have shorter durations.

Morningstar calculates monthly breakpoints using the effective duration of the Morningstar Core Bond Index in determining duration assignment. Long term is defined as 125% of the three-year average effective duration of the MCBI.

Category Group Index: Barclays US Agg Bond TR USD
Category Index: Barclays US Government Long TR USD
Morningstar Index: Morningstar US 10+Y Tsy & Gv Bd TR USD

Intermediate Government

Intermediate-government portfolios have at least 90% of their bond holdings in bonds backed by the U.S. government or by government-linked agencies. This backing minimizes the credit risk of these portfolios, as the U.S. government is unlikely to default on its debt. These portfolios have durations typically between 3.5 and 6.0 years. Consequently, the group’s performance — and its level of volatility — tends to fall between that of the short government and long government bond categories. Morningstar calculates monthly breakpoints using the effective duration of the Morningstar Core Bond Index in determining duration assignment. Intermediate is defined as 75% to 125% of the three-year average effective duration of the MCBI.

Category Group Index: Barclays US Agg Bond TR USD
Category Index: Barclays US Government TR USD
Morningstar Index: Morningstar US 5-10Y Tsy & Gv Bd TR USD

Short Government

Short-government portfolios have at least 90% of their bond holdings in bonds backed by the U.S. government or by government-linked agencies. This backing minimizes the credit risk of these portfolios, as the U.S. government is unlikely to default on its debt. These portfolios have durations typically between 1.0 and 3.5 years, so they have relatively less sensitivity to interest rates and, thus, low risk potential. Morningstar calculates monthly breakpoints using the effective duration of the Morningstar Core Bond Index in determining duration assignment. Short is defined as 25% to 75% of the three-year average effective duration of the MCBI.

Morningstar Index: Morningstar US 1-5Y Tsy & Gv Bd TR USD
**Inflation-Protected Bond**

Inflation-protected bond portfolios invest primarily in debt securities that adjust their principal values in line with the rate of inflation. These bonds can be issued by any organization, but the U.S. Treasury is currently the largest issuer for these types of securities.

Category Group Index: Barclays US Agg Bond TR USD
Category Index: Barclays US Treasury US TIPS TR USD
Morningstar Index: Morningstar US TIPS TR USD

**Long-Term Bond**

Long-term bond portfolios invest primarily in investment-grade U.S. fixed-income issues including government, corporate, and securitized debt. Their durations (a measure of interest-rate sensitivity) typically range above 125% of the three-year average of the effective duration of the Morningstar Core Bond Index.

Category Group Index: Barclays US Agg Bond TR USD
Category Index: Barclays US Govt/Credit Long TR USD
Morningstar Index: Morningstar US 10+Y Corp Bd TR USD

**Intermediate Core Bond**

Intermediate-term core bond portfolios invest primarily in investment-grade U.S. fixed-income issues including government, corporate, and securitized debt, and hold less than 5% in below-investment-grade exposures. Their durations (a measure of interest-rate sensitivity) typically range between 75% and 125% of the three-year average of the effective duration of the Morningstar Core Bond Index.

Category Group Index: Barclays US Agg Bond TR USD
Category Index: Barclays US Agg Bond TR USD
Morningstar Index: Morningstar US Core Bd TR USD Hdg

**Intermediate Core-Plus Bond**

Intermediate-term core-plus bond portfolios invest primarily in investment-grade U.S. fixed-income issues including government, corporate, and securitized debt, but generally have greater flexibility than core offerings to hold non-core sectors such as corporate high yield, bank loan, emerging-markets debt, and non-U.S. currency exposures. Their durations (a measure of interest-rate sensitivity) typically range between 75% and 125% of the three-year average of the effective duration of the Morningstar Core Bond Index.

Category Group Index: Barclays US Agg Bond TR USD
Category Index: BBgBarc US Universal TR USD
Morningstar Index: None
Short-Term Bond
Short-term bond portfolios invest primarily in corporate and other investment-grade U.S. fixed-income issues and typically have durations of 1.0 to 3.5 years. These portfolios are attractive to fairly conservative investors, because they are less sensitive to interest rates than portfolios with longer durations. Morningstar calculates monthly breakpoints using the effective duration of the Morningstar Core Bond Index in determining duration assignment. Short-term is defined as 25% to 75% of the three-year average effective duration of the MCBI.

Morningstar Index: Morningstar US 1-5Y Core Bd TR USD

Ultrashort Bond
Ultrashort-bond portfolios invest primarily in investment-grade U.S. fixed-income issues and have durations typically of less than one year. This category can include corporate or government ultrashort bond portfolios, but it excludes international, convertible, multisector, and high-yield bond portfolios. Because of their focus on bonds with very short durations, these portfolios offer minimal interest-rate sensitivity and therefore low risk and total return potential. Morningstar calculates monthly breakpoints using the effective duration of the Morningstar Core Bond Index in determining duration assignment. Ultrashort is defined as 25% of the three-year average effective duration of the MCBI.
Category Group Index: Barclays US Agg Bond TR USD
Category Index: Barclays Govt/Corp 1 Yr Duration TR USD
Morningstar Index: Morningstar US 1-5Y Core Bd TR USD

Bank Loan
Bank-loan portfolios primarily invest in floating-rate bank loans and floating-rate below investment-grade securities instead of bonds. In exchange for their credit risk, these loans offer high interest payments that typically float above a common short-term benchmarks such as Libor or SOFR.
Category Group Index: Barclays US Agg Bond TR USD
Category Index: S&P/LSTA Leveraged Loan TR
Morningstar Index: Morningstar US 1-5Y Core Bd TR USD
Stable Value
Stable-value portfolios seek to provide income while preventing price fluctuations. The most common stable-value portfolios invest in a diversified portfolio of bonds and enter into wrapper agreements with financial companies to guarantee against fluctuations in their share prices. These wrapper agreements typically provide price stability on a day-to-day basis, thereby insulating each portfolio’s net asset value from interest-rate volatility. Therefore, the duration for each of these funds is essentially zero. This category is used only in Morningstar’s custom fund, separate account, and collective investment trust databases.
